

Ecoreflex

Ultra-reflective, self-cleaning and photocatalytic liquid protective coating (such as **Ecoreflex**) formulated with water-based synthetic resins and special additives. Formulated in such a way as to trigger the process of photocatalysis, it breaks down pollutants and reduces pollution. By reflecting the sun's rays, it lowers the temperature of the substrate to which it is applied and reduces the use of air conditioning systems. Ideal for covering horizontal, sloping and vertical surfaces, and on bituminous or slated sheathing substrates. Minimum required characteristics: Reflectance 82%; Thermal Emissivity (E) 90%; Solar Reflex Index (SRI) 103%; Break Elongation 327%; Weathering Test 1680 hours (>10 years).
