

Vapostop

Single-component, water-based primer (such as **Vapostop**) formulated with silylated polymers to improve adhesion on cementitious substrates and create a barrier against the formation of blistering, protecting waterproofing products from detachment caused by humidity. Designed to increase the degree of adhesion of waterproofing and acrylic coatings on cementitious substrates, it can also be applied to damp substrates. It is able to close the porosity of the surface. Primer to be used in combination with liquid waterproofing and coatings. Minimum required characteristics: Capillary absorption and water permeability < 0.1 kg·m⁻²·h^{-0,5}; Direct traction adhesion > 0,8 N/mm² | 116.03 lb/in²; Water vapour permeability Coefficient – Class I.
