

## *Thermikoat Cool Wall*

Latex-based, extra white, thermal reflective coating (such as **Thermikoat Cool Wall**), formulated with special mineral powders, designed for outdoor applications on cold surfaces that cause condensation and mould formation, thus eliminating thermal shocks and bridges from surfaces. The product improves thermal comfort in hot weathered periods, keeping surfaces cooler, and does not affect insulation in cold periods. Minimum required characteristics: Difference of temperature on concrete – Up to +5°C | +41°F; Film forming temperature +5°C | +41°F; Water vapour permeability coefficient  $\mu=8$ ; Solar Reflex Index (SRI) = 109.
